## 1. EXECUTIVE SUMMARY

This report summarizes results of a Stormwater Utility Feasibility Study completed for the Town of Holland, Wisconsin. The study was completed under the guidance of the Town of Holland Town Board, with the primary goal to provide input into features such as creation of a stormwater utility, rate structure, budget, and credit policy.

This study provides the Town with a general overview of the current stormwater management practices and funding in the Town of Holland, background information on stormwater utilities and other funding alternatives, estimates of impervious areas by land class in the Town, identification of a potential stormwater utility rate structure, and an evaluation of potential impacts of stormwater utility formation on select properties.

The Town of Holland operates and maintains a stormwater system, which includes various drainage infrastructures such as grassed swales and ditches, and storm sewers. Aging infrastructure, weather intensity, location (a fast-growing area) and increasing cost of construction is creating a need for a solution that will help alleviate the stormwater issues that the Town is facing.

Currently the cost of operation, expansion, and maintenance of the Town's drainage infrastructure are paid by property taxes through the General Fund. The Town's increasing responsibility for the infrastructure has strained the General Funds resources. The investments related to stormwater management have been very minimal in the last few years.

One possible means of addressing stormwater management funding needs is formation of a stormwater utility. A stormwater utility is a utility formed for the purpose of managing stormwater and imposing user charges for cost recovery. Unlike property tax funding, user charges under the stormwater utility are established in proportion to the relative amount of stormwater runoff "generated" by an individual property. A common method of estimating the relative amount of stormwater runoff from a property is by the amount of "impervious area". Impervious area includes surfaces such as rooftops, parking lots, and driveways that generally resist infiltration of stormwater. Typically, there is a greater amount of stormwater runoff from impervious areas than vegetated areas.

Stormwater Utility creation is allowed, as specified in State Statute 66.0821, to aid in funding of operations and maintenance of the municipal separate storm sewer system. Stormwater Utilities have become an increasingly popular means of funding in Wisconsin, specifically, and the United States, in general. The Utility charges each user a reasonable fee based on their impact on storm sewer services.

The purposes of this report are to evaluate the feasibility of creating a Stormwater Utility in the Town of

Holland and to establish a preliminary budget and user fee rate for the Utility.

Additionally, this document will specify anticipated responsibilities of the stormwater utility, which are as follow:

- Administer Municipal Stormwater Permit MS4. Part of the Town of Holland is included in the Municipal Separate Storm System (MS4) as described under NR 216, Wisconsin Administrative Code. The MS4 permits require municipalities to reduce polluted stormwater runoff by implementing stormwater management programs with best management practices (BMP).
- Fund and administer stormwater management operation and maintenance activities. Activities include cleaning and routine repair of ditches, detention basins, greenways, storm sewers, leaf collection, and construction of stormwater treatment, detention, and conveyance facilities serving a public purpose.
- Respond to customer billing and service inquiries.

The proposed stormwater utility rate structure is based on a parameter known as an equivalent runoff unit (ERU). One ERU is defined as the average square footage of impervious area for a typical residential parcel. Impervious area on a parcel is the amount of area on that particular parcel that does not allow water to absorb easily into the soil. There is a strong correlation between the impervious area on a property and the amount of stormwater leaving that property. A sampling of single-family properties was reviewed to develop a typical impervious area for single-family properties. The impervious area analysis estimated that in the Town of Holland, one ERU is equivalent to approximately 21,780 square feet (rounded) (0.5 acre) of impervious area, which is the basis for the stormwater utility rate structure. Therefore, single-family residential parcels with a lot size of less than 2 acres are assigned one ERU. The ERU assignment and therefore fees for nonresidential parcels will be based on land designation:

- Developed farmland properties with a parcel size equal to or greater than 2 acres, will be assigned 0.5 ERU.
- Commercial development properties, will be assigned ERUs by dividing the total estimated impervious area on that parcel by the typical single-family residential impervious area of 21,780 square feet. The ERU will be rounded up to the nearest 1/10 amount.
- Undeveloped land such as farmland and wooded areas are exempt and will not be assigned ERUs.
- Municipal properties and cemeteries are exempt and will not be assigned ERUs.

The assumption of the ERU equivalent correlates to the proposed stormwater utility budget. The Utility budget amount was developed based on review of past road budgets for the Town of Holland. At this point, the planned annual budget will be \$60,000. The amount is to cover funding for projects to improve existing stormwater systems and maintenance activities. Dividing the stormwater utility annual budget by the total number of ERU's in the Town, the unit cost per one ERU per year was calculated to be \$40 per year per ERU.

## **2. BACKGROUND INFORMATION**

### **2.1. Introduction**

This study provides an overview of current stormwater management practices and funding in the Town of Holland and provides a plan to develop an alternate funding source for future stormwater management planning and improvements projects. The Town of Holland currently owns and maintains an extensive network of roads, storm sewer, and drainage structures. The operation and maintenance are paid for by property taxes through the General Fund. Aging infrastructure, limited budget, and the increasing cost of construction are putting pressure on the General Fund. This makes the budget a less reliable source of funding for stormwater projects, which have been a lesser priority over other expenditures.

The possible means of addressing stormwater management programs is the creation of stormwater utility. A stormwater utility is a utility formed for the purpose of managing stormwater and imposing user charges for cost recovery. Unlike property tax funding, user charges under a stormwater utility are established in proportion to the relative amount of stormwater runoff “generated” by an individual property. The purpose of this report is to provide the following information toward evaluation of stormwater utility formation in the Town of Holland:

- A general overview of current stormwater management practices and funding in the Town of Holland.
- Background information on stormwater utilities and other funding alternatives.
- Results of an impervious area analysis of the Town and estimation of equivalent runoff units (ERUs).
- Identification of possible stormwater utility responsibilities.
- Identification of a possible user fee rate structure based on the Town’s current budget.
- Evaluation of potential impacts on select properties.

### **2.2. Stormwater Management Activities**

The Town currently undertakes a number of stormwater management activities. Responsibilities for these activities are divided between various aspect including Planning, Development, and Compliance with MS4, maintenance of the roadway drainage, alleviation of the stormwater issues based on comments of the residents. The incurred stormwater management costs are generally paid by property taxes through the Town’s general fund. Future Town stormwater management responsibilities and expenditures are expected to increase over the next several years as a result of aging and undersized infrastructure, weather intensity, and mandated regulatory requirements coming from MS4.

#### **2.2.1. Operation and Maintenance**

The Town owns and maintains a drainage system consisting of inlets, catch basins, storm sewers culverts, ditches, detention basins, and associated appurtenances. Each year additional culverts, ditches, storm sewer basins are constructed with a number of these requiring additional and continued inspections to ensure effective operation. The Town also conducts yard waste management activities that include a leaf and grass

disposal site. The curbside brush chipping is performed on the second Tuesday of the month, April through October.

### 2.2.2. Capital Improvements

In 2019, the Town spent more than \$450,000 on highway/street maintenance. Investment in the stormwater management was minimal. The Town Board recognizes that there is a need to increase funding for stormwater management, with the primary focus on stormwater system capacity improvements and flood control.

A list of eligible stormwater capital costs includes:

- Conveyance Facilities
  - o Culverts/bridges
  - o Ditches/Swales
- Storage/Treatment/BMPs
  - o Wet detention basins (typically for water quality purposes)
  - o Dry detention basins (typically for water quantity or flood control purposes)
  - o Infiltration basins/swales
  - o Bio-retention basins/swales
  - o Rain gardens/barrels

Appendix A includes Town Budgets for the last three years.

### 3. STORMWATER UTILITIES

#### 3.1. Background Information

Stormwater utilities collect the funding necessary for stormwater management activities based on the amount of stormwater produced on a particular property, typically through the amount of impervious area within the property. Therefore, the smaller amount of stormwater collected, the smaller the proportionate fee collected for service.

Stormwater utilities, like other public utilities, include property owners that are normally tax exempt and therefore do not contribute funds for stormwater management. Therefore, the stormwater utility collects from all properties that contribute significant runoff to or benefit from the Town-managed stormwater collection system.

Stormwater utilities are authorized under Chapters 61 and 66 of the Wisconsin Statutes. Section 66.0821 allows municipalities to create a system for collecting, transporting, pumping, treating, or disposing of stormwater. Some examples of eligible costs are:

- Planning and Design
- Construction and Maintenance of Storm Sewers
- Ditching
- Stream Bank Stabilization
- Construction and Maintenance of Detention/Retention Basins
- Street Sweeping
- Leaf Collection
- NR 216 Programs
- Reimbursement of Past Expenditures (Debt Retirement)

The main benefit of a stormwater utility is the ability to create a dedicated source for funding stormwater management improvements.

A recent survey by the Wisconsin Chapter of the American Public Works Association (APWA) dated August 15, 2019, documented 122 stormwater utilities in Wisconsin. The actual number in Wisconsin is possibly higher than reported, and most likely as high as 150 municipalities. There are currently multiple communities in La Crosse County that have stormwater utilities in place. These include neighbors of the Town, such as the City of Onalaska, the Town of Onalaska, and the Village of Holmen.

Annual residential rates in Wisconsin range from a **low of \$11** a year in the Town of Lawrence (1 ERU = 1,000 sq. ft.) to a **high of \$175** in the City of Appleton (1 ERU = 2,368 sq. ft.). The average yearly cost of an ERU across the 122 utilities is approximately \$63.50. It is expected that most utility rates will increase in the

coming years to address additional expenditures necessary to meet stormwater permit requirements and the need to address aging infrastructure. The results of the APWA Survey are provided in Appendix B.

Development and implementation of a stormwater utility typically involves the following steps:

- Educating municipal administration, elected officials, and the public. This may involve the formation of a steering committee consisting of various sectors of the public, mailings to homeowners and businesses, and public meetings.
- Developing a stormwater management plan to estimate costs and revenue that needs to be recovered through the stormwater utility. The stormwater plan should identify short-term and long-term priorities and establish a preliminary short-term budget (one to two years).
- Developing a conceptual stormwater utility rate structure.

This will require the following information:

- Land use identification, estimation of acreage under each land use, and determination of the number of parcels under each land use.
- Determination of the appropriate factors to apply to different land use categories. This is based on hydrologic characteristics of each land use category.
- Revenue needs, as determined in the stormwater management plan.
- The relationship between estimated amounts of runoff per parcel-to-parcel charges. There are several methods to assess these charges. The most common method is based on ERUs. ERUs represent runoff from a parcel. These units calculate and levy stormwater charges by multiplying a rate factor by a parcel area. A common application is to establish a typical single-family residential lot as having one ERU. The ERUs assigned to a land use of a different type are based on the amount of stormwater runoff produced in comparison with a typical single-family residential site.
- Prepare a stormwater utility and user charge ordinance. This Ordinance establishes the legal authority for the utility and establishes criteria in determining the user charge.
- Determine billing procedures. Most municipalities include the stormwater user charge on monthly utility bills or property taxes.

## 3.2. Funding for Stormwater Projects

### 3.2.1. General Property Tax

Stormwater management and related operations have been funded through the general tax levy. The general tax levy is based on assessed property value and, therefore, the cost of stormwater service is distributed amongst the tax base. The tax base does not include tax-exempt properties such as schools, churches, and public property, which also contribute stormwater runoff to the system. In addition, the amount of stormwater runoff

produced from residential property is typically less than the runoff produced from other land use classifications. This is due to the fact that a residential property typically has a higher percentage of grassed area, which allows more stormwater to soak into the ground, producing less runoff. Therefore, the collection of stormwater management funds through general property tax levy may not be the most equitable method of collection because it does not include all properties that contribute stormwater runoff (or that benefit from the Town's stormwater management systems) and is not directly related to the amount of runoff generated from a property.

### 3.2.2. Assessments

New infrastructure required because of new development is normally funded by the developer of the land through developer constructing the infrastructure, impact fees, and/or development agreements. Special Assessments can also be applied to reconstruction projects, but assessment is typically a less desirable method of funding. The assessment area can be based on the entire drainage basin being served or on the front foot of property being served by a stormwater collection system.

### 3.2.3. Grants and Loans

Financial Assistance is available for local stormwater and pollution control efforts through various DNR Loan and Grant Programs. Unfortunately, the budget for funding of these grants and loans is capped and limited.

Urban Nonpoint Source & Stormwater Grant Program (UNPS & SW) funds are used for control of polluted runoff in urban project areas and stormwater management. These funds are awarded to both planning and construction projects. Planning Grants are cost shared up to a maximum of 70% and the construction costs are cost shared up to 50% and up to a maximum of \$150,000.

UNPS & SW grant funds are limited in that they may not be used to fund dredging projects, projects related to new developments, or projects that do not have a water quality benefit. Projects that are not water quality based include projects designed only to relieve flooding or drainage issues.

Grants and loans can continue to offset the cost of a stormwater system program regardless of the funding mechanism used to collect the funds to operate the system. However, in and of themselves, grants and loans are not a predictable or reliable source of funding. Grants related to stormwater programs are historically very competitive and have a relatively low per project funding amount.

## 4. IMPERVIOUS AREA ANALYSIS

### 4.1. General

The impervious area on a parcel is the amount of area on that parcel that does not allow water to absorb easily into the soil. There is a strong correlation between the impervious ground cover on a property and the amount of stormwater runoff leaving that property. These impervious areas include hard surfaces such as rooftops, driveways, sidewalks, patios, as well as compacted areas of soil such as gravel driveways and parking areas. In addition, impervious areas accumulate pollutants that are readily carried offsite by stormwater runoff. It is important to understand that all lands generate some type of runoff.

Therefore, the impervious area analysis is an appropriate basis for developing utility user fees. The measurement and calculation of impervious area on a parcel will determine the proportionate share of the annual stormwater utility budget that will be charged to each individual property or utility customer.

### 4.2. Data Sources and Impervious Area Measurement Method

The La Crosse County GIS database was utilized to evaluate parcel impervious areas. The GIS database included parcel areas and aerial photography from 2020. Using GIS software, the impervious area was isolated and calculated for parcels throughout the Town. It was determined that an ERU should equate to 21,780 square feet. The list of all properties (as of January 2021) in the Town is included in Appendix C.

Additionally, the review of La Crosse Land Records revealed that there are 2,588 registered parcels within the Town of Holland. We were able to identify parcels and sort them in the following groups:

- State of Wisconsin DNR, WisDOT, Federal, and Municipal Land.  
Total number of parcels is 446.
- Residential Properties and Agriculture Farms with Buildings  
Total number of parcels is 1,571.
- Productive Farmland, Wooded Properties, Undeveloped Residential Lots.  
Total number of parcels is 546.
- Commercial Developed Properties  
Total number of parcels is 25.

### 4.3. State of Wisconsin DNR, WisDOT, Federal, and Municipal Land.

The parcels included in this list are tax exempt, and they are excluded from stormwater fees.

#### 4.4. Residential Properties and Agriculture Farms with Buildings.

The Town currently has 1,640 developed single-family residential properties and agriculture farms with buildings. A representative, random sample of 40 single-family residential properties was measured for impervious area. An average (mean) impervious area was determined for the 40 single-family parcels (including 15 farm properties) to be 5,309 square feet. The median value for the 40 parcels was 4,663 sq. ft.

#### 4.5. Productive Farmland, Wooded Properties, Undeveloped Residential Lots.

There are 524 properties that fit this category. The subject properties were investigated by using La Crosse County GIS and Land Record System.

#### 4.6. Commercial Properties.

There are 25 properties that fit this category. The properties include the following:

- A Campground
- Churches and Cemeteries
- A Golf Course and Supper Club
- Storage Units
- A Local Airport
- A Trailer Park

The impervious area analysis estimated that in the Town of Holland, one ERU is equivalent to approximately 21,780 square feet (rounded) (0.5 acre) of impervious area. This is the basis for the stormwater utility rate structure. Therefore, single-family residential parcels with a lot size of less than 2 acres are assigned one ERU. The ERU assignment and therefore fees for nonresidential parcels will be based on land designation:

- Developed farmland properties with a parcel size equal to or greater than 2 acres, will be assigned 0.5 ERU.
- Commercial development properties, will be assigned ERUs by dividing the total estimated impervious area on that parcel by the typical single-family residential impervious area of 21,780 square feet. The ERU will be rounded up to the nearest 1/10 amount.
- Undeveloped land such as farmland and wooded areas are exempt and will not be assigned ERUs.
- Municipal properties and cemeteries are exempt and will not be assigned ERUs.

## 5. USER FEE RATE STRUCTURE DETERMINATION

### 5.1. General

The primary consideration in creation of a stormwater utility is identification of parameters used to establish stormwater utility rates. The rate structure must have a direct relationship to the amount of stormwater runoff draining from a parcel.

Parameters most impacting stormwater runoff from a parcel includes the following:

- Parcel size.
- Impervious area (rooftops, parking lots).
- Percent developed.
- Land use.
- Impervious area “connectedness.”
- Slope.
- Soil type.
- Type of drainage system.

Most stormwater utilities in Wisconsin and throughout the country use parcel size and/or impervious area to determine utility fees. This is because the relationship between these parameters and stormwater runoff volumes is typically the most apparent and understandable to the public. However, every property generates some amount of runoff. In most cases land use is affecting how fast the rainwater is traveling to the discharge point.

### 5.2. Impervious Area-Based Rate Structures

Rate structures based exclusively on the amount of impervious area on a parcel are the most common types in Wisconsin and throughout the country. These generally fall into either a flat residential rate approach or a variable rate approach.

#### 5.2.1. Flat Rate

The flat rate approach typically consists of assignment of one ERU to each single-family residential parcel. An ERU is the average impervious area present on a single-family residential parcel based on measurement of a random sampling of residential parcels within the service area. ERUs are assigned to nonresidential parcels based on dividing the actual measured impervious area by the average impervious area for a typical single-family residential parcel. For example, if one ERU is based on an average residential impervious area of 6,000 square feet, then a nonresidential parcel with 30,000 square feet of measured impervious area would be assigned 5 ERUs (30,000 square feet divided by 6,000 square feet = 5 ERUs). In this way, a nonresidential parcel having five times the amount of impervious area of a typical single-family residential parcel will pay five times the average residential charge for stormwater management. The primary benefit of this approach is

that it is easy to calculate and it is generally understandable to the public. The primary disadvantage is that all residential properties are treated equally. A single-family residential parcel having a 4,000-square-foot house would pay the same as a parcel having a 2,000-square-foot house.

### 5.2.2. Variable Rate

The variable rate approach is a variation on the flat rate approach. In this case each property's impervious area is calculated individually, and ERUs are assigned. The ERU base is set very low (1 ERU = 1,000 sq ft) and fractional ERUs are used. This approach has the benefit of improving equality in fees as property owners are paying for actual impervious surfaces at their properties. The disadvantage of this method is that will become difficult and expensive to administer. Any change in impervious area on a property (addition of a concrete patio) would change that customer's stormwater utility fee.

### 5.3. Rate Structure for Town of Holland

Several factors have been considered in developing the Town of Holland stormwater utility rate structure. The rate structure must:

- Generate adequate revenue to fund the Town's stormwater management program.
- Equitably charge a customer based on the impact the owned property has on the actual cost of the Town's stormwater management program costs.
- Be understandable to the public.
- Be relatively easy and inexpensive to administer.
- Be legally defensible.

Based on discussions with the Town Board members, it was generally agreed that the rate structure should be a flat rate for residential and agricultural properties with a conservative assumption that one ERU is equivalent to approximately 21,780 square feet (rounded) (0.5 acre) of impervious area. At the same time, it was determined that there should be a consideration that smaller sized residential parcels are contributing a greater amount of stormwater when compared to a farmstead. The residential property lot coverage ratio of impervious surfaces including buildings and driveways is a lot higher compared to a farmstead that sits on a 30-acre parcel. Therefore, the Town Board decided to create a flat rate structure based on parcel size with a limit of 2 acres as the separating factor. Any parcel that is smaller than 2 acres will be assigned one ERU. Parcels with a size greater than 2 acres will be assigned 0.5 ERU. The charge for commercial development was determined to be a combination of the flat fee (residential and agricultural properties with size greater than 2 acres) and variable rate and it will be based on the number of ERUs created by dividing the total estimated impervious area by the set standard 21,780 square feet. The ERU will be rounded up to the nearest 1/10 amount. The Town Board decided not to impose stormwater charges for undeveloped land.

## 6. STORMWATER UTILITY

### 6.1. Stormwater Utility Service Area and Responsibilities

The projected stormwater utility service area is primarily the area within the Town of Holland limits. The Utility will have the following primary goals:

- Provide a more equitable means of funding the Town's stormwater management program.
- Provide a mechanism to fund the Town's future stormwater needs, including new MS4 compliance, and storm sewer improvements.

The following are the anticipated responsibilities of the stormwater utility:

- Fund and administer stormwater management operation and maintenance activities. Activities include cleaning and routine repair of ditches, detention basins, greenways, storm sewers, catch basins, street sweeping, leaf collection, and construction of stormwater treatment, detention, and conveyance facilities serving a public purpose.
- Respond to customer billing and service inquiries.

Prior to implementation of the stormwater utility, it is recommended the Town develop an organizational structure identifying how the utility will be staffed and governed. It is anticipated the Town of Holland Town Board would be the governing authority over the Stormwater Utility (including the Utility Board).

## **7. EVALUATION OF PROPERTY IMPACTS**

### **7.1. General**

This section summarizes the proposed annual stormwater utility fee for each property classification using the established user fee rate. In addition, a comparison of cost distribution between the tax basis and the stormwater utility fee basis is provided. The impacts are shown based on a first-year annual utility budget of \$60,000. The list of properties with assigned ERUs is attached in Appendix D.

### **7.2. Residential Properties and Farms with Buildings with parcel size under 2 acres.**

There are 1,174 developed single-family residences and agriculture farms with buildings within the study area. These parcels are determined to be equal to one (1) ERU. Therefore, each parcel will be charged \$40.00/year.

### **7.3. Residential Properties and Farms with Buildings with parcel size more than 2 acres.**

There are 397 developed single-family residences and farms with buildings within the study area. They are determined to be equal to one half (0.5) ERU. Therefore, each parcel will be charged \$20.00/year.

### **7.4. Nonresidential, Commercial Properties**

There are 25 developed commercial properties within the study area. Their ERU number will be calculated as described in Sections 1, 4.6, and 5.3 above. are determined to be equal to a calculated ERU unit. The fee will be calculated by multiplying the parcel's calculated ERU number times the rate for Residential Properties and Agriculture Farms with parcel size under 2 acres (\$40/year). For example, a developed commercial property with a calculated ERU of 1.5, will be charged \$60/year (1.5 X \$40/year).

### **7.5. Productive Farmland, Wooded Properties, Undeveloped Residential Lots.**

All productive farmland, wooded properties, and undeveloped residential parcels will not be charged a stormwater fee.

### **7.6. Fee Impacts**

The impacts of converting to a user fee-based method of stormwater system funding will be evaluated for various residential, commercial, industrial, and tax-exempt properties. It is anticipated that the impact will be minimal to none as the proposed ERU rate is marginal.

## **8. STORMWATER UTILITY ORDINANCE**

### **8.1. Introduction**

The stormwater utility ordinance is included as Appendix E. The ordinance provides language on the creation of the stormwater utility and policies.

### **8.2. Credits**

The ordinance includes a credit policy for commercial property owners who reduce their impact on the Town's stormwater management program. To be eligible for a credit, the reduction in impact must exceed the minimum stormwater management requirements in force at the time the management device is constructed. For example, if a newly developed commercial property constructs a stormwater detention pond meeting the current minimum detention standards, it would not be eligible for a credit. If, however, the pond is oversized to provide a benefit beyond the current minimum requirements, the property would be eligible for a credit. The designed features shall exceed La Crosse County standards and be able to maintain or reduce from the pre-developed rates for 50-year, 24-hour storm events and safely pass 100-year, 24-hour storm events without overtopping or flooding.

There are certain stormwater management activities that the Town must conduct that benefit the entire community, regardless of whether an individual property contributes runoff to the Town's stormwater system. Therefore, a maximum credit of 50 percent has been established.

**NOTICE OF PUBLIC BUDGET HEARING  
FOR THE TOWN OF HOLLAND**

Notice is hereby given that on Wednesday, November 8, 2017, a PUBLIC HEARING on the PROPOSED 2018 BUDGET of the Town of Holland in La Crosse County will be held. The hearing will take place at the Town Hall at 7:00 p.m. The proposed budget in detail is available for inspection at the town clerk's office from 8:00 a.m. to 1:00 p.m. on Monday and Thursday mornings or 3:00 to 6:00 p.m. on Wednesday evenings. The following is a summary of the proposed 2018 Budget:

	2017 Budget	2018 Budget	Difference	%
<b>Revenues</b>				
Property taxes	476,055	492,997	16,942	3.6%
Federal Aids	1,000	975	(25)	-2.5%
State Aids	262,670	319,127	56,457	21.5%
Licenses & Permits	40,955	31,400	(9,555)	-23.3%
Public Charges (refuse, etc.)	188,300	211,000	22,700	12.1%
Rent	7,200	7,900	700	9.7%
Interest	3,000	3,800	800	26.7%
Misc. Revenue	13,485	12,840	(645)	-4.8%
Cash Reserves & Proceeds	80,036	25,000	(55,036)	-68.8%
<b>Total Revenues</b>	<b>1,072,701</b>	<b>1,105,039</b>	<b>32,338</b>	<b>3.0%</b>
<b>Expenses</b>				
General Government	153,550	151,000	(2,550)	-1.7%
<b>Public Safety</b>				
Fire Protection	154,276	184,456	30,180	19.6%

**ORDINANCE #XXX**  
**STORMWATER UTILITY ORDINANCE**

**SECTION 1.0 INTRODUCTION**

1.01 Purpose

It is determined and declared to be necessary and conducive to the protection of the public health, safety, welfare and convenience of the Town to collect charges from all users of the Town stormwater collection system. The proceeds of such charges will be used to fund the management of its stormwater system of the Town to include reinvestment in the maintenance and improvement of existing infrastructures, and other improvements to the system that will reduce urban non-point source pollution in stormwater run-off consistent with federal and state regulations.

1.02 Authority

The Town is acting under the authority of Chapters 60 and 66 of the Wisconsin Statutes, and particularly without limitation the following sections: §§ 66.0809, 66.0811, and 66.0821.

1.03 Powers and Duties of Utility.

- (A) Creation and supervision. The Town of Holland hereby establishes a Stormwater Utility. The operation of the Stormwater Utility shall be subject to the review of the Town Board. The Utility Board shall be responsible for the maintenance and management of the Stormwater Utility under direction of the Board.
- (B) Facilities. The Town, through the Stormwater Utility, may acquire, construct, lease, own, operate, maintain, extend, expand, replace, clean, dredge, repair, conduct, manage, and finance such facilities as are deemed by the Town to be proper and reasonably necessary for a system of stormwater and surface water management. These facilities may include, but are not limited to, land, surface and underground drainage facilities, storm sewers, watercourses, ponds, ditches, street sweepers, leaf vacuums and such other facilities and equipment relating to collection of runoff, sediments, and other pollutants as will support a stormwater management system, whether such facilities are owned and operated directly by the Town or are provided under statutory or contractual provisions and furnishings of which facilities create or impose a cost or charge upon the Town for the services afforded by such facilities.
- (C) Rates and charges. The Town may establish such rates and charges as are necessary to finance planning, design construction, maintenance, administration, and operation of the facilities in accordance with the procedures set forth in this article.

- (D) Budgeting process. The Stormwater Utility Board shall prepare an annual budget, which is to include all operation and maintenance costs, debt service, administrative fees, and other costs related to the operation of the Stormwater Utility. The costs shall be spread over the rate classification as determined by the Board. The budget is subject to the public hearing and approval process, set forth in § 65.90, Wis. Stat.
- (E) Excess revenues. The Stormwater Utility will retain any excess of revenues over expenditures in a year in a segregated Stormwater Enterprise Fund, which shall be used exclusively for purposes consistent with this article.
- (F) Financing methods. The Town Board has the authority as provided in §§ 66.0821, 66.0627 and 66.0703 and may exercise such authority with respect to all financing methods such as user charges, special charges, special assessments and liens as provided therein.

#### 1.04 Definition

Unless the ordinance specifically indicates otherwise, the meaning of terms used in this section shall be as follows:

- (A) “Developed Property” means real property which has been altered from its natural state by the addition of any improvements, such as a building, structure or impervious surface.
- (B) “Dwelling Unit” means a single unit or apartment providing complete, independent living facilities for one or more persons, including permanent provisions for living, sleeping, eating, cooking, and sanitation.
- (C) “Equivalent Run-Off Unit (ERU)” means the statistical average amount of horizontal impervious area per single family property of all “single family properties” within the Town on the date of adoption of this ordinance.
- (D) “Farmstead Home Site” means the portion of any agricultural property which contains one or more dwelling units, and vehicle garage regardless of whether the dwelling units are on a separate lot or parcel.
- (E) “Fiscal Year” means a twelve (12) month period commencing on the first day of January of any year.
- (F) “Impervious Area” or “Impervious Surface” means a horizontal surface which has been compacted or covered with a layer of material so that it is highly resistant to infiltration by rainwater. It includes, but is not limited to, semi-impervious surfaces such as compacted clay, gravel, as well as streets, roofs, sidewalks, parking lots, and other similar surfaces.

- (G) “Mobile Home” means a single residential unit (mobile home) within a mobile home park.
- (H) “Nonresidential” means any developed property not used, primarily, as a permanent residence, such as a commercial, industrial property or an institutional property (schools, churches, hospitals, fraternal organizations, parks, municipal facilities, etc).
- (I) “Operating Budget” means estimated revenues and the estimated costs for operations and maintenance, extension, and replacement of the system for each fiscal year.
- (J) “Operation and Maintenance” means the current expenses, paid or accrued, of operation, maintenance, and current repair of the system, as calculated in accordance with sound accounting practice and includes, without limiting the generality of the foregoing, insurance premiums, administrative expenses, labor, executive compensation, the cost of materials and supplies used for current operations, and charges for the accumulation of appropriate reserves for current expenses not annually incurred, but which are such as may reasonably be in accordance with sound accounting practice.
- (K) “Rate” means the user fee charged on each ERU. The rate is determined by the Stormwater Utility Board and approved Town Board for each fiscal year.
- (L) “Revenues” mean all rates, fees, assessments, rentals, fines or other charges or other income received by the Town in connection with the management and operation of the system, including amounts received from the investment or deposit of moneys in any fund or account, as herein required, and any amounts contributed by the Town, all as calculated in accordance with sound accounting practices.
- (M) “Single Family” or “Single Family Property” means a residential property with exactly one (1) dwelling unit.
- (N) “Stormwater System” or “System” means the existing stormwater collection system of the Town and all improvements thereto which by this section are constituted as the property and responsibility of the Town to be operated as an enterprise to, among other things, conserve water, control discharges necessitated by rainfall events, incorporate methods to collect, convey, store, absorb, inhibit, treat, use or reuse water to prevent or reduce flooding, over- drainage, environmental degradation and water pollution or otherwise affect the quality and quantity of discharge from such system.
- (O) “Stormwater Utility” means the Town of Holland Stormwater Utility, Utility Board means the Town of Holland Stormwater Utility.

- (P) “Town” means the Town of Holland, Town Board means the Town Board of the Town.
- (Q) “Undeveloped Land” means any real property with no impervious area.
- (R) “User Fee” means the charge established by the Town Board on developed property in the Town to pay for operations and maintenance, and extension and replacement for the stormwater system.

## **SECTION 2.0 RATE AND CHARGES**

### **2.01 User Fee**

- (A) User Fee. The Town Board shall require that adequate revenues are generated through user fees to provide for a balanced operating budget. The Town Board hereby authorizes the imposition of user fees on all developed property in the Town.

### **2.02 Rates**

- (A) Rates. The Stormwater Utility Board shall recommend to the Town Board modification of the rates for each fiscal year. All rates established by the Stormwater Utility Board and approved by the Town Board will be fair and reasonable and calculated to achieve a balanced operating budget for the system. Current rates will be on file in the office of the Town Clerk and Town Treasurer.
- (B) The Town Board shall set the ERU Rate by Separate Resolution.

### **2.03 Rate Structure**

- (A) For purposes of imposing the ERU charges, all lots and parcels within the Town shall be classified into the following four customer classes:
  - (i) Exempt: including State of Wisconsin, WI DOT, Federal and Municipal Land.
  - (ii) Residential and Farmstead 1: including all residential and farmstead properties with lot size under 2 acres.
  - (iii) Residential and Farmstead 2: including all residential and farmstead properties with lot size over 2 acres.
  - (iv) Commercial Properties: including all commercial development and churches. The fee will be based on the number of ERUs created by dividing the total estimated impervious area on that parcel by the typical single-family residential impervious area of 21,780 square feet. The ERU will be rounded up to the nearest 1/10.

(B) The Stormwater Utility shall prepare a list of lots and parcels within the Town of Holland and assign a customer classification of residential, nonresidential, or undeveloped to each lot or parcel.

(C) The average square footage of impervious area of one ERU is established to be equivalent to 21,780 square feet.

(D) ERUs shall be calculated as follows:

- (i) Exempt: No ERU charge.
- (ii) Residential and Farmstead 1: 1 ERU.
- (iii) Residential and Farmstead 2: 0.5 ERU.
- (iv) Productive Farmland, Wooded Properties, Undeveloped Residential Lots: No ERU charge.
- (v) Commercial Properties: The charges imposed for the properties, as defined herein, shall be the rate for one ERU, multiplied by the numerical factor obtained by dividing the total impervious area of property by the square footage of one ERU. The ERU value factor shall be rounded up to the nearest 1/10, i.e., impervious area in square feet.

$$\frac{\text{Total Impervious Area}}{21,780 \text{ square feet}} = \text{ERU Rate}$$

Commercial Properties ERUs shall be calculated as follows:

$$\frac{296,180 \text{ square feet}}{21,780 \text{ square feet}} = 12.359 \text{ ERUs}$$

Where:

- 296,180 square feet is measured impervious surface within the developed parcel.
- 21,780 square feet is impervious area of one ERU

(A) The Stormwater Utility/consultant shall be responsible for determining the impervious area, based upon the best available information, including, but not limited to, data supplied by the Town, aerial photography, the property owner, tenant, or developer. The Stormwater Utility/consultant may require additional information, as necessary, to make the determination. The billing amount shall be updated by the Stormwater Utility/consultant on any additions to the impervious area. Upon the property owner's written notification and request, the Stormwater Utility/consultant shall review impervious area for possible reductions.

- (B) New construction. For all classifications other than single-family residential, the construction of new or expanded buildings, driveways or other structures shall be subject to an increase in the number of ERUs assigned to a lot or parcel. The Town shall recalculate the number of ERUs upon completion of new construction.

#### 2.04 Billing and Payment

- (A) The user fee is a special charge to be billed on the taxpayers' tax bill. The special charge is due by January 31 of each year.

#### 2.05 Lien

- (A) All user fees established hereunder shall be a lien upon the property served pursuant to sections 66.076 (7) and 66.069 of the Wisconsin Statutes and shall be collected in the manner therein provided.

### **SECTION 3.0 CREDIT POLICIES**

The Town Board shall adopt a system of stormwater utility credits and shall operate as follows. In general, no credit shall be given for the installation of stormwater management facilities required by the Town, La Crosse County, or State Stormwater Regulations.

#### 3.01 Credit

- (A) A nonresidential property owner may seek a credit on the ERU charge where it has installed and maintained an on-site stormwater management system that both mitigates flood impacts and provides treatment of pollutants in stormwater runoff. The designed features shall exceed La Crosse County standards and be able to maintain or reduce from the pre-developed rates for 50-year 24-hour storm events and safely pass 100-year 24-hour storm events without overtopping or flooding.
- (B) No credit shall be considered for structural or nonstructural best management practices that are required in order to comply with any local, state, or federal regulation including but not necessarily limited to the La Crosse County Stormwater Management Ordinance, and state regulations such as NR 151, 216, Chapter 30 and NR 103.
- (C) No credits shall be considered for any "natural" features such as but not limited to wetlands, lakes and floodplains or water impoundment of any kind in existence prior to passage of this Ordinance.
- (D) In general, no credit shall be given for the installation of stormwater management facilities required by the Town, La Crosse County, or State Stormwater Regulations.

### 3.02 Adjustment of Fee and Appeal Procedure

- (A) Requests for Adjustment. Requests for adjustment of the user fee shall be submitted to the Stormwater Utility, who is hereby given the authority to develop and administer the procedures and standards for the adjustment of fees as established herein. All requests shall be judged on the basis of the amount of impervious area on the site. Requests for adjustment shall be limited to non-residential properties owners. However, the Town retains the right to grant stormwater user fee credits to individual properties within the Town that exhibit benefits to the storm water management system. The following procedure shall apply to all adjustment requests of the user fee.
- (i) Any non-residential customer who has paid a user fee and believes the user fee to be incorrect, may, within thirty (30) days of the payment and subject to the limitations set forth in this section, submit an adjustment request of the Stormwater Utility.
  - (ii) Adjustment requests shall be in writing and set forth in detail, the grounds upon which relief is sought.
  - (iii) The customer requesting the adjustments will be required, at his own expense, to provide supplemental information to the Stormwater Utility, including, but not limited to, survey data approved by a Registered Land Surveyor (R.L.S.) and engineering reports approved by a Professional Engineer (P.E.). Failure to provide such information may result in the denial of the adjustments request.
  - (iv) The customer requesting the adjustments will be required to provide a signed agreement for services. This form will allow the Town Board and/or Stormwater Utility Board to retain the services of professional consultants when needed (including planners, engineers, architects, attorneys, environmental specialists, recreation specialists and other experts) to assist in the Town's review of a proposal coming before the Stormwater Utility and/or Town Board.
  - (v) The Stormwater Utility shall issue a written determination as to whether the request for adjustment shall be granted. For adjustments that are granted, a credit shall be applied to the customer's account. The credit shall only apply for the period of time subsequent to the filing of the request for adjustment. There shall be no retroactive adjustment for fees collected prior to the filing of the request. Denials of adjustment requests shall be made, in writing.

3.03 Appeal Procedure.

- (A) Upon receipt of the written denial of an adjustment request, the customer who initially requested the adjustment may, within thirty (30) days of receipt of such denial, appeal to the Town Board.
- (B) The Town Board shall complete its review within forty-five (45) days of the receipt of said request for review. The Town Board determination shall be in writing and set forth in detail, the reason, or reasons for its decision.
- (C) In reviewing denials of adjustment requests, the Town Board shall apply the standard and review criteria contained in subsection 3.02 (A) of this section.

3.04 Public Service Commission Complaint

- (A) Any user may file a complaint with Public Service Commission claiming that rates, rules and practices herein are unreasonable or unjustly discriminatory pursuant to State Statutes 66.076(9), Wis. Stats.

**SECTION 4.0 EFFECTIVE DATE**

Following passage by the Town Board, this ordinance shall take effect the day after the date of publication or posting as provided by sec. 60.80, Wis. Stats.

Duly adopted by the Town Board of the Town of Holland on \_\_\_\_\_, 202\_\_.

TOWN OF HOLLAND

\_\_\_\_\_  
Steve Michaels, Town Chair

ATTESTED TO:

\_\_\_\_\_  
Marilyn Pedretti, Town Clerk
